

5732925

CE ntering detent 38 to interface with the mounting subassembly 14. The thickness of the channel floor 36 may or may not be the same as the thickness of the block portion 28 situated underneath the dissipation fins 32, depending on the particular purpose of the system 10.

The structure of the mounting subassembly 14 is best illustrated in FIGS. 2 and 3, where it may be seen to include a spring clip 40 and an adjusting screw 42.

The threaded adjusting screw 42 mates with a complimentarily threaded aperture 44 extending through a pretensioned
